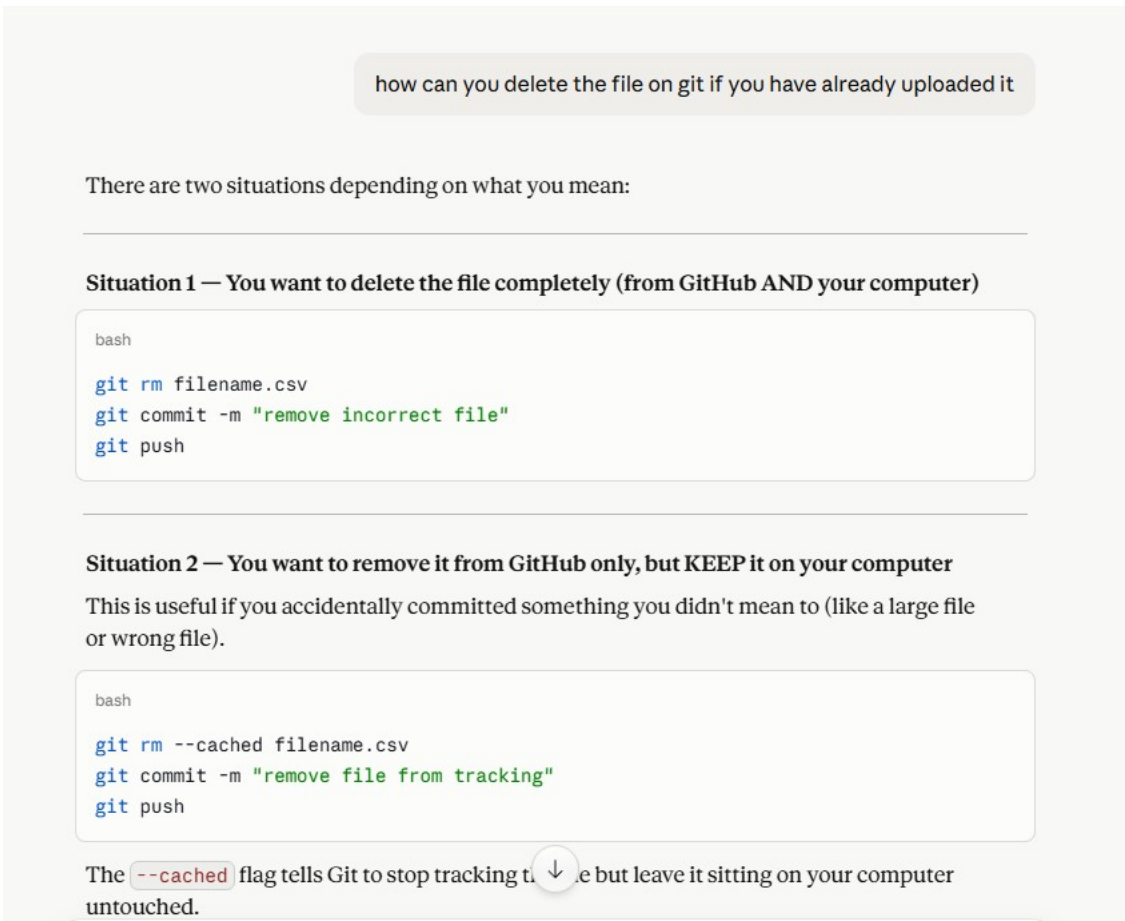
Appendix

Inayat Gill (36880817)

Please find below the AI queries related to the assignment



how can you delete the file on git if you have already uploaded it

There are two situations depending on what you mean:

Situation 1 — You want to delete the file completely (from GitHub AND your computer)

```bash
git rm filename.csv
git commit -m "remove incorrect file"
git push
```

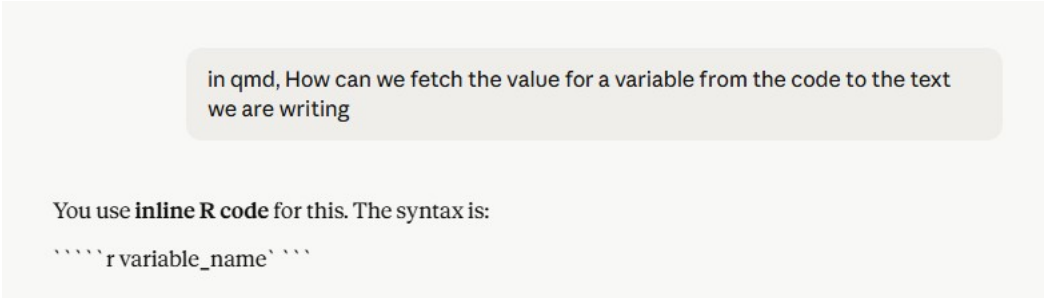
Situation 2 — You want to remove it from GitHub only, but KEEP it on your computer

This is useful if you accidentally committed something you didn't mean to (like a large file or wrong file).

```bash
git rm --cached filename.csv
git commit -m "remove file from tracking"
git push
```

The `--cached` flag tells Git to stop tracking the file but leave it sitting on your computer untouched.

Figure 1: Screenshot 1

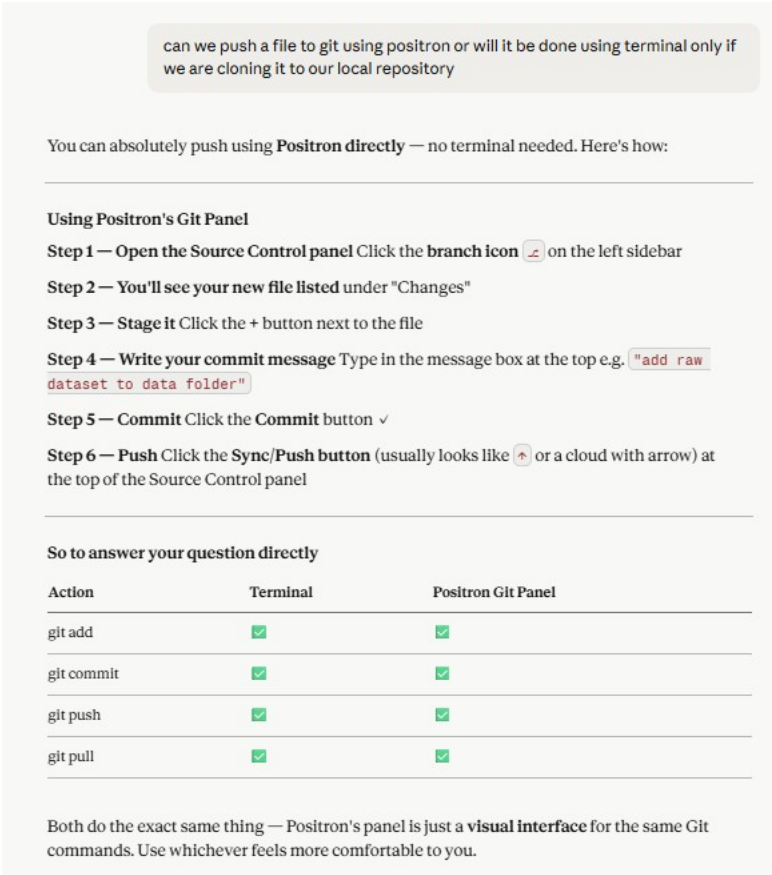


in qmd, How can we fetch the value for a variable from the code to the text we are writing

You use **inline R code** for this. The syntax is:

`` ` ` ` ` ` r variable_name` ` ` ``

Figure 2: Screenshot 2



can we push a file to git using positron or will it be done using terminal only if we are cloning it to our local repository

You can absolutely push using **Positron directly** — no terminal needed. Here's how:

Using Positron's Git Panel

Step 1 — Open the Source Control panel Click the **branch icon** on the left sidebar

Step 2 — You'll see your new file listed under "Changes"

Step 3 — Stage it Click the + button next to the file

Step 4 — Write your commit message Type in the message box at the top e.g. `"add raw dataset to data folder"`

Step 5 — Commit Click the **Commit** button ✓

Step 6 — Push Click the **Sync/Push button** (usually looks like ↑ or a cloud with arrow) at the top of the Source Control panel

---

So to answer your question directly

Action	Terminal	Positron Git Panel
git add	✅	✅
git commit	✅	✅
git push	✅	✅
git pull	✅	✅

Both do the exact same thing — Positron's panel is just a **visual interface** for the same Git commands. Use whichever feels more comfortable to you.

Figure 3: Screenshot 3

After using the git pull function, the file from the local pc was also deleted. Do i manually add the file the data folder on my pc and then push the changes onto github?

Yes, exactly! Here's what to do:

Steps

Step 1 — Manually copy your CSV file back into the `data` folder on your PC

```
C:\MSBA - Sem 1\In class\Collaborative practices\Assignment 1\assignment-1-creating-reproducible-reports-Inayat-Gill\data\
```

Just drag and drop or copy-paste the file there from wherever you have it saved (Downloads, Desktop, etc.)

Step 2 — Stage it

```bash
git add "data/36880817_Inayat Gill.csv"
```

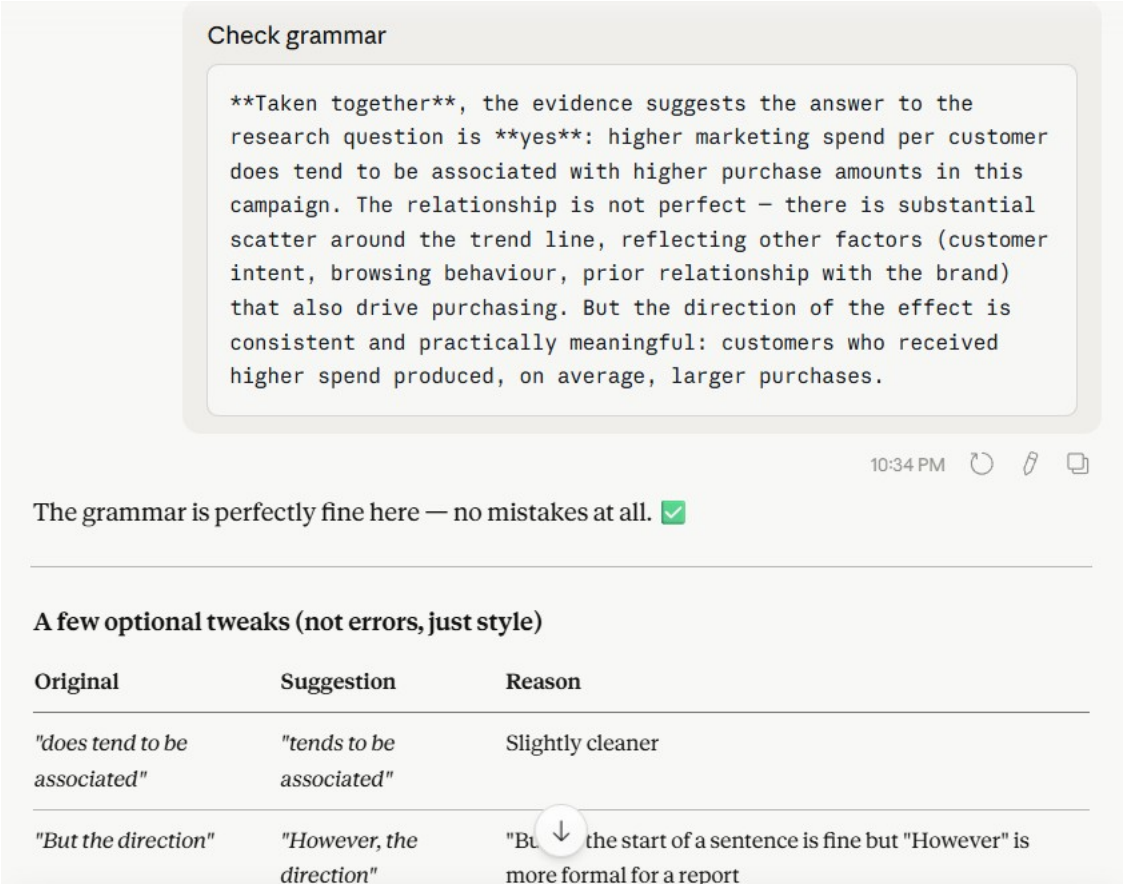
Step 3 — Commit with a clear message

```bash
git commit -m "add raw dataset to data folder"
```

Step 4 — Push to GitHub

```bash
git push
```

Figure 4: Screenshot 4



Check grammar

```
**Taken together**, the evidence suggests the answer to the
research question is **yes**: higher marketing spend per customer
does tend to be associated with higher purchase amounts in this
campaign. The relationship is not perfect — there is substantial
scatter around the trend line, reflecting other factors (customer
intent, browsing behaviour, prior relationship with the brand)
that also drive purchasing. But the direction of the effect is
consistent and practically meaningful: customers who received
higher spend produced, on average, larger purchases.
```

10:34 PM

The grammar is perfectly fine here — no mistakes at all. ✅

A few optional tweaks (not errors, just style)

Original	Suggestion	Reason
"does tend to be associated"	*"tends to be associated"*	Slightly cleaner
"But the direction"	*"However, the direction"*	"Bu the start of a sentence is fine but "However" is more formal for a report
